About this Web Magazine

This Journal was created under the direction of Wally Hansen – a dedicated Grower, Aficionado and Passionate Lover of Northwest Native Plants.

This Journal is not 'commercial.' Our goals are:

A — To generate interest, even passion, concerning the magnificent Native Plants of the Pacific Northwest.

B — To help you create your own Native Plant Gardens, large or small, for home or work.

C — To help you propagate and “grow on” those species that interest you the most.

D — To inform both Home Gardeners and interested Professionals of many disciplines concerning trends and news items from my little corner of the world.

E — To help the reader enjoy native plants more by understanding the historical and cultural role of native plants (i.e.–use by Native Americans, Pioneers, Early Botanists, etc.).

Blanket Flower
(*Gaillardia aristata*)
Photo by JoAnn Onstott

On the Cover

Douglas Aster

(*Symphyotrichum subspicatum*)

Lavendar fringe around a bright orange puff. Who would have thought these two colors would look good together? But they do. And somehow they tell us that fall won't be long in coming.

Leslie L. Haskins in his 1967 book, *Wildflowers of the Pacific Coast*, calls this "our commonest purple aster, .. another of the plants named after that indefatigable botanist, David Douglas."

"The flowers often begin to appear in June, becoming more common as the season advances, until in September and October they are in their glory. From then on they begin to decline, but if the season is mild and open, a few stray flowers may be found almost throughout the winter."

A fitting description of our "commonest" aster.

Photo by JoAnn Onstott

To Do List

Caring for your NW Native Plant Garden

1 – Begin withholding water from perennials so they will prepare to reproduce themselves via seeds.

2 – Cut branches of colorful leaves and interesting seed pods. Hang them upside down in bunches in a cool dark place while they dry. This preserves the color as much as possible. Identify the plants carefully however. The brightest colors at this moment are poison oak and many of the very beautiful seed pods are invasives. These are not good choices for displaying in your home.

3 – Journal your garden. Note what did well and what did not. Also note the shrubs and trees you see that are particularly colorful so you can add them when the fall sales begin.

4 – If you are into basket making, the reeds and grasses should be ripe for cutting about now. Roll them loosely together and lay them flat as they complete drying. An old screen door propped up on saw horses is a perfect place to do this.

5 – Apples that grow in waste places are falling to the ground. You'll see them along side country roads and around old abandoned homesteads. They will probably have worms and other kinds of bugs but they are fine for drying. Pick the nicest looking apples and leave the rest for wildlife. Deer are particularly fond of apples. Wash your 'keepers' and shine them with old toweling or denim. Slice thinly, about 1/4 inch or less, and arrange on screening or in the food dryer. Dry them very slowly so they don't turn into applesauce on you. You can string these on good twine for holiday garlands. They also make fantastic wreaths--I use a wire coat hanger for these. Rhododendron or salal leaves and rose hips are nice additions. I've sold 4 foot garlands for \$50 and wreaths for \$35 at craft fairs. I only made a few each year and folks would call me in September to reserve them. I'll write up the recipe for making these in next month's journal. For now, get the apples!

6 – Almost forgot--watch for rose hips on native roses. They must be gathered before the rains begin or they won't keep. See our October journal for tips on using them.

Easy bouquet: gather your favorite flowers and leaves loosely in your fist, tie with raffia or string and place in a decorative vase.

Sparky's Corner

A special message from our frisky contributor

Some of our favorite summer visitors are getting ready to leave. Every year they come to see us in spring and then when the nights start getting cold, they go back to their winter home--that's usually the bottom part of California or the top part of Mexico.

We can always tell when they get here because they sing so much, especially the boys. Soon as they arrive they start in singing and prancing around to get attention from the girls. Grandma told me they can sing over 3000 songs in one day! That must really poop them out.

She said it takes about 45 days to pick out a mate, make some eggs, sit on the nest for about 2 weeks and then take care of the baby birds about another 2 weeks. That's why they start on the singing as soon as they get here. They have a lot to do and a short time to do it.

We really like the songs. The boys do most of the singing. They have different ones for different occasions. Like when those pushy cow birds come around, or when they are trying to impress the ladies. One of their songs is almost like a rap, real fast, they sing "sweet-sweet-sweet-I'm-so-sweet." And sometimes the girls will say "chirp" right at the end of the song. So cool!

Oh yeah, forgot to tell you these birds are Yellow Warblers. Grandma says that's their common name and their real name is Dendroica petechia. This is like our common name is Western Gray Squirrel but

our real name is *Sciurus griseus*. And Jennifer's real name is "The Native Plant Lady." Haha--I am so funny! Diana named her that because she's a Native American and she knows all about plants.

[⇒More⇒](#)

Sparky's Corner, continued

Anyway, there are a whole bunch of kinds of Yellow Warblers but ours are the *Dendroica petechia* kind. They are bright sunshine yellow. The boys are really bright and have red streaks on their chests and the girls' color is not so bright and no red streaks.

At first I didn't know what kind of birds they were. We just called them the sunshine birds. But Jennifer asked our friend Sharon Stiteler (Bird Chick) and she told us they are Yellow Warblers.

The reason they like staying with us at the nursery is because we have lots of willows and big shade trees and a nice sunny meadow and all the two-leggers are so nice. Really, we have the best two-leggers, both the ones that live here and the ones that come every day and the ones that come whenever they want to.

Speaking of two-leggers, here's two of my favorites. It's George and Diana trying to take a hoop house apart so they can put it on the truck. They'll do anything for a little fun.

Well, I gotta go hang out with the warblers before they fly away. See you next time.

*Your friend,
Sparky*

Northwest Native Grasses

Stars of the late summer garden

Perennial plants add casual beauty to your landscape

Landscape designs with clean, simple lines are gaining favor around the world. We are seeing less lawn and more islands surrounded by mulch, raised beds with walkways between and dry streambeds of river rock with groupings and feature plants.

The more we understand global warming and the ecological effects of maintaining unnatural garden design, the more these new schools of thought make sense to us. They are far easier on both gardener and pocketbook and, once we compare the cost of natural plantings to the old-fashioned "Jones's" designs we begin doing a happy dance in celebration of true understanding.

Here in the Northwest we are fortunate to have a wide variety of shrubs, perennials, ferns, trees, water plants and grasses that are native to wet and windy coastal regions, fertile valleys, mountain ranges, and high desert areas. NW Native plants are tiny orchids and giant conifers and everything in between. No matter where in the northwest you live, there are all kinds of plants suitable for any style of garden.

Let's take a look at a class of plants growing in popularity: the native grasses.

Soft Rush
(*Juncus effusus*)
Photo by JoAnn Onstott

[⇒More⇒](#)

Grasses, continued

| | |
|----------------------------|---|
| Common Name | Soft Rush |
| Scientific Name | <i>Juncus effusus</i> |
| Native Region | Western North America |
| Moisture Conditions | Coastal, water's Edge, wetlands & standing Water |
| Light Preference | Full Sun, Partial Sun |
| Wildlife Value | birds, small mammals |
| Height | less than 3' |
| Bloom Time | Summer |
| Evergreen | No |
| Comments | Very common shoreline plant; food for beaver and common muskrat; excellent cover for wetland birds, various songbirds and small mammals |

Soft Rush
(*Juncus effusus*)
Photo by JoAnn Onstott

⇒ More ⇒

Grasses, continued

| | |
|----------------------------|--|
| Common Name | Tufted Hairgrass |
| Scientific Name | <i>Deschampsia cespitosa</i> |
| Native Region | Western United States |
| Moisture Conditions | dry - wet |
| Light Preference | sun - part shade |
| Wildlife Value | birds, small mammals |
| Height | 20 - 36 inches |
| Bloom Time | Cloud-like green to gold inflourences in summer that turn to light golden straw color; lasts into winter; good as cut flower |
| Evergreen | no, perennial |
| Comments | Narrow leaved bunch grass that is attractive with the wind blowing through its tall seed plumes. Plant in drifts of 5 or more for a meadow like effect. Plants usually do a nice job of reseeding themselves. Perfect for salt water shorelines. |

Tufted Hairgrass
(*Deschampsia cespitosa*)
Photo by JoAnn Onstott

Grasses, continued

| | |
|---------------------|--|
| Common Name | Slough Sedge |
| Scientific Name | Carex obnupta |
| Native Region | Western U.S. |
| Moisture Conditions | Moist, wet |
| Light Preference | Sun – part shade |
| Wildlife Value | Seed is important food for many bird species, new growth is browsed by many animals. |
| Height | 3 feet |
| Bloom Time | July-August |
| Evergreen | Yes |
| Comments | This is a great evergreen sedge that spreads readily. Leaves are excellent for making baskets. |

Slough Sedge
(*Carex obnupta*)
Photo by JoAnn Onstott

⇒ More ⇒

Grasses, continued

| | |
|---------------------|---|
| Common Name | Spreading Rush |
| Scientific Name | <i>Juncus patens</i> |
| Native Region | Oregon to Baja California. |
| Moisture Conditions | Moist to wet. |
| Light Preference | Sun to light shade |
| Wildlife Value | Nesting material, food, and shelter for many insects, birds, and mammals. |
| Height | 1 – 3 feet |
| Bloom Time | Mid-summer to fall. |
| Evergreen | Yes |
| Comments | Historically, rushes were used in weavings, and peeled stems soaked in grease were used as candles. Rushes continue to be used for making mats and woven furniture in Asia. |

Spreading Rush
(*Juncus patens*)
Photo by JoAnn Onstott

Grasses, continued

| | |
|---------------------|---|
| Common Name | Witchgrass |
| Scientific Name | <i>Panicum capillare</i> |
| Native Region | Western North America |
| Moisture Conditions | Sandy to gravelly areas, some moisture. |
| Light Preference | Full sun |
| Wildlife Value | Birds feed on seeds, small mammals and deer browse new growth. |
| Height | 1 – 3 feet |
| Bloom Time | June - November |
| Evergreen | No |
| Comments | A loosely tufted annual with clumps of flat, linear, mid-green leaves, to 12 inches long. In late summer and fall, bears dense panicles of tiny, greenish-brown spikelets on fine branchlets. |

Witches Grass
(*Panicum capillare*)
Photo by JoAnn Onstott

⇒ More ⇒

Grasses, continued

| | |
|---------------------|---|
| Common Name | Baltic Rush |
| Scientific Name | <i>Juncus balticus</i> |
| Native Region | Native in Canada from Labrador across and down into southern California. |
| Moisture Conditions | Does not require drainage, accepts seasonal flooding. |
| Light Preference | Full to partial sun. |
| Wildlife Value | Provides good cover and seeds for waterfowl, songbirds, and small mammals. |
| Height | 2 ½ - 4 feet. |
| Bloom Time | May - August |
| Evergreen | No, perennial. |
| Comments | Used by muskrats to construct huts and for food. Important as a winter forage for elk and also provides good cover for many bird species. |

Baltic Rush
(*Juncus balticus*)
Photo by JoAnn Onstott

⇒ More ⇒

Grasses, continued

| | |
|----------------------------|--|
| Common Name | Dagger-Leaved Rush |
| Scientific Name | <i>Juncus ensifolius</i> |
| Native Region | Native to much of western North America from Alaska to central Mexico, and into eastern Canada. |
| Moisture Conditions | Wet |
| Light Preference | Sun – shade |
| Wildlife Value | Extremely important to wildlife. Birds (waterfowl, shorebirds, songbirds and game birds) eat the seeds. Muskrats eat roots and small animals, such as turtles, muskrats and snakes, shelter in its foliage. Waterfowl nest in dense clusters. Amphibians lay eggs at the base and their young are somewhat protected from predation. |
| Height | 2 feet |
| Bloom Time | Summer |
| Evergreen | Perennial |
| Comments | Flat, leaves similar to a small iris. Spreads by rhizomes and produces an interesting round seedhead. A nice addition to a pond or wetland. |

Dagger-Leaved Rush
(*Juncus ensifolius*)
Photo by JoAnn Onstott

⇒ More ⇒

Grasses, continued

| | |
|----------------------------|--|
| Common Name | Hare's Tail Grass |
| Scientific Name | Lagurus ovatus |
| Native Region | Oregon, California and some parts of Canada. |
| Moisture Conditions | Sandy or well-drained soil. |
| Light Preference | Full sun |
| Wildlife Value | Birds are fond of the seed heads. |
| Height | 12 – 18 inches |
| Bloom Time | Late spring/early summer to late summer/early fall |
| Evergreen | Annual, self sows freely. |
| Comments | Hare's-tail Grass is often grown for its 2-inch seed heads that can be used in dried arrangements. The dense seed heads resist shattering. Good for small gardens. Superb container plant. |

Cottontail drawing by TJ,
a dad in Minnesota

⇒ More ⇒

Grasses, continued

There are many more grasses native to the northwest. Each one has a small, inconspicuous flower with lovely seed heads which provide much interest in the fall and winter garden.

The seed heads are often used in dried flower arrangements together with Pearly Everlasting (*Anaphalis margaritacea*), Yarrow (*Achillea millefolium*) and colorful leaves.

A wonderful fall feast for birds can be made by braiding bunches of dried grasses into a wreath. Pleasing to the eye and fun to watch the birds as they dine!

This is the perfect time to select grasses for your garden because they are at the end of the bloom cycle and seed heads are almost fully developed.

From large to small, Northwest Native grasses will last many years and reproduce easily. Bring birds to your yard with this group of plants. Easy to care for, most are drought tolerant and never need mowing!

Hare's Tail Grass
(*Lagurus ovatus*)

Onstott

Northwest Family fun

Unusual events in our area

Now that the state fair has come and gone and school has started, we are in that golden time before the winter holidays. The sun shines most days and usually a light jacket is all that is needed in the evening.

Vegetable gardens are nearing the last of the harvest. Late season fruits are ripening but not quite ready. The final huckleberry has put a glow in our tummies.

We're thinking it might be just the time for something a little different. Gas prices are a little lower so short trips are more welcome.

A beach picnic and some kite-flying is always great. But if you've been there and done that, here are a few choice goings-on you may be interested in.

Bigtooth Maple or Rocky Mountain Sugar Maple
(*Acer grandidentatum*)

Fig. 207. *Acer grandidentatum*, n. Nutt. (¾).

Kids Day for Conservation

Corvallis Parks & Recreation is proud to sponsor the fifth annual Kids Day for Conservation, a day of free, fun, hands-on, natural resource education.

Over 30 local and state-wide natural resource organizations and businesses will present a wide variety of activities suitable for children of all ages.

You will discover amphibians, insects, fish and other critters that live in our farms, forests and urban areas.

There will be do-it-yourself nature art projects. You can build a bird house to take home, climb a rock wall, and shoot a bow and arrow. Learn how soil “works” and how to conserve energy.

See how wildfire spreads and how to protect your family from it.

Participate in the Great Western Oregon Forest Scavenger Hunt and learn about farm and forest products that are produced locally.

Ages: All

Location: Benton County Fairgrounds

Date: Saturday, September 20th

Time: 10 am - 4 pm

Cost: FREE -Pick up a bookmark/bus pass at the Corvallis Parks & Recreation office which will get you a FREE round-trip to the Fairgrounds to attend the event!

An easy way to teach kids about native plants and caring for the earth.

Oregon Aquaculture Association

OAA

Pond School 2008

Development, Management & Enjoyment of Your Pond

Saturday, September 20, 2008 (All Day Event)

This workshop is intended for anyone interested in farm ponds, ornamental ponds, pond fishes and pond management. Topics will include areas of pond ecology, weed and algae management, fish health, pond construction, repair and maintenance and naturescaping. Evening presentations include: "Protecting Oregon's Native Turtles" and "Silent Invasion". On-line registration: <http://www.oregonaquaculture.org>

Location: FivePine Lodge & Conference Center
City: Sisters
State: OR
Cost: \$75 full registration: \$55 for OSU Extension personnel and Oregon Aquaculture Association members.
Contact: Jim Bowman
Contact Phone: 1-541-737-6427
Contact Email: james.bowman at oregonstate.edu
Contact Department: AquaFish Collaborative Research Support Program

The next 5 events are at Portland's Japanese Garden

An adult evening enjoying this beautiful garden.

O-Tsukimi Moonviewing

September 14, 15, & 16, 6-8:30 pm

Members \$25/Non-members \$35

Reservations begin August 1 and are required

There is no better place in Portland to share the romance and mystery of the full moon in mid-September than from the eastern courtyard of the Garden Pavilion, cup of sake in hand, gazing at the harvest moon as it rises above the city.

Moonviewing, or O-Tsukimi, is a traditional Japanese festival which honors the full moon in autumn. Enjoy a quiet evening in the Garden, observe a tea ceremony in the Kashin Tei Tea House and listen to the music of Mitsuki Dazai as she performs traditional melodies on a stringed instrument called the koto. Hear a poetry reading by Peter Kendall and write your own haiku in honor of the autumn moon. Sip sake or tea, enjoy a light sampling of seasonal Japanese foods, and experience a rare walk through the lantern-lit Garden during moonlit hours. From the Garden's spectacular east-facing view, watch breathlessly as the moon rises over the mountains and downtown Portland. A romantic evening in the Garden not to be missed!

Photo by
Stephen Bridges

This is an adult event and children 12 and under will not be admitted. All other guests are required to purchase a full-price member or non-member ticket. Space is limited, reservations required. Please call (503) 542-0280 or sign up online.

Kashintei tea house

Chado 茶道, the Way of the Tea, is the practice of preparing, serving, and drinking Tea. Since the 15th century, it has been a study in preparing a bowl of powdered green tea (*matcha* 抹茶) as well as incorporating many of the arts of Japan. This elegant yet simple practice reflects the philosophy of the four principles of Tea:

Harmony (*Wa* 和)

Respect (*Kei* 敬)

Purity (*Sei* 精)

Tranquility (*Jaku* 寂)

In keeping with this philosophy, Wakai Dokokai offers firsthand experiences enjoying, studying, and understanding the spirit of the Tea.

From *Chado: The Way of the Tea* by Wakai Dokokai, Portland, OR

Tea Ceremony Demonstrations

September 20, 2008

October 18, 2008

1pm & 2pm

No Reservations Needed

Join us in the Tea Garden of the Portland Japanese Garden for a demonstration of tea prepared by Kashintei Kai. Tea ceremony demonstrations are offered at the Garden on the third Saturday of every summer month at 1pm and 2pm. In keeping with this philosophy, Wakai Dokokai offers firsthand experiences enjoying, studying, and understanding the spirit of the Tea.

From *Chado: The Way of the Tea* by Wakai Dokokai, Portland, OR

Ancient ceremony sure to delight. Include children if they are mature enough to enjoy.

Fun, continued

Fence-building Workshops

Day 1--September 27, 9am-3pm

Day 2--September 28, 9am-3pm

Reservations required and space is limited

(503) 542-0280 or online

Lunch not included—participants are encouraged to bring a sack lunch

Conducted by Head Gardener Michael Kondo, with Virginia Harmon, Director of Grounds Maintenance, assisting, this two-day workshops provides background information on bamboo fence building as well as hands-on practice.

Day One (9/27)

Includes lecture with a review of the history and evolution of Japanese bamboo fence styles, hands-on tool practice, and knot-tying demonstrations.

Day Two (9/28)

This workshop incorporates a fence-building project which allows participants to practice the skills they learned on Day One. Day One workshop or prior experience required for participation in Day Two workshop.

Reservations

Space is limited, reservations required. Please call (503) 542-0280 or sign up online,

Choose Your Workshop:

\$85.00 — Day One Only (Sep 27)

\$150.00 — Both Days (Sep 27–28)

Almost everyone can learn these techniques. Children will need assistance.

Fun, continued

From Oregon Wild, Herman Creek Mushroom and Native Plant ID Workshop

When: Oct 24, 2007 from 08:30 am to 05:00 pm

Where: Carpools depart from Portland

Contact Name: Nanci Champlin

Contact Email: nc@oregonwild.org

Contact Phone: 503.283.6343 x 203

Join Oregon Wild naturalist Wendell Wood for a mushroom and native plant ID workshop on the Herman Creek trail, in the Columbia Gorge.

(Moderate, 4 miles, 500' elev. gain)

Explore the old-growth groves on Herman Creek in the Columbia River Gorge as you learn to identify the many mushrooms and other native plants in this area. The great Columbia Fire of 1902 and subsequent smaller fires burned most of the old-growth forest in the Columbia River Gorge, but the big trees at Herman Creek remain. Plant list provided. *Please note that mushrooms will not be gathered on this outing.*

How to RSVP:

Since there is a high probability that rain may postpone the event to the next day, please sign up only if you are available both days.

Be sure to RSVP with your **name, address, phone number (where you can be reached last minute) and an e-mail** so we may contact you with complete details prior to the event. If you are registering a friend, be sure to include their contact information, too.
